

Reduce Risk

Rationalize, organize and enable ECM best practices with FileFacets

In industries like healthcare, oil & gas, and government, there is increasing pressure to make digital content meet regulatory compliance standards. To facilitate this, organizations must launch new ECM initiatives, even though this can be a daunting and difficult process.

Poor ECM practices and lack of organization often perpetuate existing content issues. The result is that unclassified, unattributed or unorganized content makes its way into the new ECM clogging it, or worse, disrupting the migration process entirely.

With FileFacets' unique content classification system, potential errors are eliminated, regulatory demands are easily met and ECM migration is done quickly and efficiently.

Avoid non-compliance with FileFacets

Complying with internal records management policies or external regulations is daunting, and non-compliance can lead to costly and detrimental repercussions for an organization.

How does FileFacets eliminate potential errors?

First, FileFacets analyzes all content so it can be properly prepared for migration. Next, target repositories are designed for maximum performance. All relevant activities can be performed with FileFacets, ensuring a cohesive experience. This includes ROT processing, content classification, taxonomy implementation, metadata attribution and multi repository migration.

What is FileFacets?

FileFacets is a robust ECM enhancement solution that facilitates ROT processing, auto-classification, and metadata mining and attribution. Unique to FileFacets is a reliable communication centre for enhanced collaboration and a pre-deployment staging area. FileFacets' SaaS model makes it a cost-effective and easy-to-deploy solution.

Partner with the right solution

Stay on top of compliance demands with FileFacets' easy-to-use deploy and automated ECM solution.
