

What is FileFacets?

FileFacets is an enterprise discovery and privacy compliance platform that makes it easy for businesses to locate, process and move unstructured content across the enterprise and individual device levels.

Find what you have.

FileFacets discovers source content from multiple repositories, collects the properties and attributes of these files.

Keep what you need.

FileFacets scrubs for all Redundant, Obsolete and Trivial files and identifies specific content across multiple repositories.

Protect sensitive data.

Take the guesswork out of handling PII. FileFacets' Machine Learning Classification scans, identifies, & clusters PII from specified sources.

Monitor continuously.

Identify ROT for cleanup and removal, identify PII for appropriate handling, and keep your shared drives clean and compliant.

Privacy Compliance

Privacy Compliance has become an important business concern due to an increasing number of regulations designed to protect unauthorized access to Personally Identifiable Information (PII).

Properly managing sensitive data should be an integral part, and in some cases, is a mandatory part of every organization's Information Governance policies. FileFacets makes that easy.

FileFacets' Privacy Compliance tool allows organizations to locate and process PII to ensure any sensitive data is kept safe and secure. PII Processing will flag files that contain any sensitive information across multiple repositories so your organization can keep track of this information and move it to a controlled environment.

Identifying PII is the first step in securing it. FileFacets allows you to confidently segregate all personal and sensitive data, allowing you to properly protect it.

Enterprise Discovery

Controlling your organization's data can be a daunting task. More than 2.5 billion GB of data is generated every single day. These numbers continue to increase, so it is important that your organization has a plan to keep your data organized.

FileFacets allows you to structure content for regulatory compliance and helps maintain proper information governance.

FileFacets' Enterprise Discovery is an easy to use tool that allows organizations to search multiple repositories for Redundant, Obsolete, and Trivial (ROT) files and cluster them using FileFacets' Machine Learning Classification.

The drag and drop function allows users to classify to a proposed Target Structure so that the appropriate files can be moved to their new destination.

FileFacets will help save your organization time and money by helping you keep control of your content.
